Database Developer

We are looking for a Database Developer who can help us implement a new ordering system. The Database Developer will be responsible for designing, testing, planning, and implementing the new database all while ensuring business continuity.

Responsibilities include:

- Implement a new, low cost ordering system
- Streamline and automate current process with new system
- Allow customers to view status of orders
- Adjust UX of ordering form (currently using Google Forms and has several limitations)
- Ensure business continuity
- Ensure data is structured properly for reporting requirements

Skills

- Degree in computer science or related field
- Experience with database implementation
- Strong problem solving skills

Volunteer Requirements

- Willingness to help your community
- Good work ethic with consistent attendance and punctuality
- Provide outstanding customer service
- Attention to detail, ability to multi-task and follow-up
- Connect with our clients, make them feel welcome, comfortable, empowered and beautiful
- Strong interpersonal skills
- Adhere to Sharia's Closet client Confidentiality Agreement
